Display

Bright, high-contrast backlit display for easier viewing.

Statistics

displays current and historical operating data allowing customers to monitor flow rate.

Status

steps through programming displays for ease in programming

Regen

manually initiate regeneration at the touch of a button.

NEW Features

- Efficiency Mode
- Predict Mode
- Pre-rinse Feature
- Pre-calculated Regeneration
- Filter Media Life Alarm

Culligan's Accusoft® Plus Controller

Standard Features

- 24 Volt Operation
- Meter and/or Aqua-Sensor®
- Unaffected by power interruptions
- Time clock backup
- EE PROM Memory
- Super CAP
- Aqua-Sensor Rinse out feature
- UL listed

NEW Features

- **Efficiency Mode** saving salt and water
 - Utilizes more of the resin bed for each service cycle.
 - Automatically sets reserve to 5% of total capacity.
- **Predict setting** anticipates need for regeneration
 - Compares remaining capacity with average daily usage. When reserve is less than average usage, regeneration is scheduled.
 - Regeneration occurs immediately if total capacity is reached.
 - This feature requires a flow meter and is active in delay operation only.
- **Pre-rinse Feature**
 - Flushes the resin bed of the unit when idle for extended periods of time.
 - Clears radon gas from the bed on radium reduction applications.
 - Helps control biogrowth when unit is idle for extended periods.
 - This feature is available on all applications (softener and filter) with meter, Aqua-Sensor® or time clock.
- **Pre-calculated Regeneration**
 - Settings for all standard softener models are stored in the processor. All you do is enter the hardness, iron, and tank size and the Accusoft Plus sets up the regeneration times, salt dosage and capacities automatically.
 - Settings may be customized where indicated by water characteristics.
 - This feature requires a meter.
- **Filter Media Life Alarm**
 - The media life alarm can be set to alert the end of the media life. This audible and visual alarm is silent between the hours of 8:00 PM and 8:00 AM.
 - This helps to assure timely media replacement in certain problem water applications.
 - The alarm can be reset after the media is replaced.
 - This alarm feature does require a meter and is available on filters only.
- **Audible Malfunction Alarm**
 - When a malfunction occurs, the appropriate code is displayed until the problem is addressed.
 - An audible tone sounds every ten seconds until a key is pressed when an error is detected. This tone is silent between the hours of 8:00 PM and 8:00 AM.
- **Statistical Functions**
 - Standard statistics displays show various current and historical operation data.
 - Displays the following when a meter is connected:
 - Current flow
 - Percent of capacity remaining
 - Today's water usage
 - Average daily water usage
